

## ELAC SUB 2080D wins the coveted EISA- Award

The EISA, the “European Imaging and Sound Association”, selected the ELAC SUB 2080D to “**Europes´ Subwoofer 2008-2009**” and awards it with the coveted “European Award”.

The ceremonial bestowal takes place on the 04<sup>th</sup> of September in the ADLON Hotel in Berlin.

Chief Editors of 53 special interest magazines from more than 20 European countries annually award the “European Awards” to products of the audio-, home cinema-, video-, and multimedia- industry.

“The sum of subjective judgements of a lot of high qualified experts results in an ideal objective decision.” Behind this consideration stands the idea that products, technologies and achievements, which have been judged of several testing offices of speciality media, are an ideal decision support for the high maintenance consumer.

The oldest and renowned association in Europe, which annually awards the “European Awards” is the EISA, the “European Imaging and Sound Association”. They judged:

„Fully-grown subwoofer powerhouse with enough juice for even the most ambitious home theatre enthusiast, Elac’s Sub 2080 D still manages to please the eye with its stylish looks and relatively small footprint. Twin 250mm drivers are employed vertically, featuring very stiff aluminium sandwich cones, and arranged in Elac’s unique ‘push-push/pull-pull’ configuration. This allows for optimal sound dispersion from a compact enclosure. Thanks to Elac’s ‘Subwoofer Precision’ technology, which electronically minimises distortions, the 2080 D makes full use of its 500W power amplifier across an 18 to 180Hz frequency range, providing a bone-shaking home theatre experience with supreme bass control, no matter how demanding the movie.“

For ELAC this commendation with the EISA-Award is a great honour and an inducement for the future!
